

End-of-Life Recycling and Safe Disposal Information

Our products for photography and videography are designed for a long lifetime. When the products reached End-of-Life they must be recycled or disposed of in a safe way. High-capacity flash products contain large capacitor banks designed to deliver powerful and reliable performance. At the end of their useful life, these products must be handled and disposed of with special care to ensure safety and environmental compliance.

Key Safety Warning

- Capacitors in flash products may retain residual charges even after being disconnected from their power source. While internal systems, such as capacitor discharge circuits, are designed to gradually discharge stored energy, these mechanisms are not foolproof.
- Residual charges can remain in the capacitors for a considerable amount of time and pose a risk of electric shock or other hazards if improperly handled.
- It is critical that disposal and recycling of these products are conducted by competent and skilled personnel with the necessary expertise and equipment.

Safe Disposal Recommendations

- Leave Disposal to Experts:
 - We strongly advise against attempting to disassemble or dispose of high-capacity flash products yourself unless you have the required skills and tools.
 - Capacitor disassembly or handling without proper precautions can lead to severe injury or equipment damage.
- Return for Recycling:
 - To ensure the safe and environmentally friendly disposal of your flash product, we offer a free return service through our network of authorized resellers and distributors.
 - Simply return your product to any authorized reseller or distributor, and they will manage its safe disposal and recycling in accordance with EU Waste Electrical and Electronic Equipment (WEEE) regulations.
- Labeling and Identification:
 - Our flash products are labeled with disposal symbols and safety warnings to remind users of the special care required.
 - Please refer to the Quick Start and Safety Guide provided with your product for additional information on safe handling and disposal.
- Environmental Responsibility:
 - By returning your product to our recycling program, you contribute to reducing waste and environmental impact, as the components can be responsibly processed and reused in compliance with the Circular Economy Directive.

Contact Information

If you have any questions about disposal or need assistance with returning your product, please contact your local authorized reseller or distributor. Alternatively, you can reach out to our customer support team for guidance.
