## Folding instruction

# How to fold your Collapsible Reflector

Profoto Collapsible Reflectors probably represent light shaping in its most uncomplicated form. They are easy to use, easy to carry and can be used for bouncing or diffusing sunlight as well as flash. The sturdy yet collapsible metal frame is equipped with two ergonomically shaped handles, which make the reflectors easy to fold and hold in various positions.

This guide will show you how to fold your Collapsible Reflector in a quick and easy way.

**1.**

Start with placing one hand on one of the handles and the other one in the opposite corner.

**2.** Push the two sides towards each other.

**3.** When they reach each other, make sure one side goes beneath the other.

4.

Keep pulling.

5.

The reflector will start to shape a circular form.

6.

When succeeded the reflector will voluntarily place itself in a folded format.

7.

Done! Your Collapsible Refelector is now folded.
